HUMANTOOL[®]

Saddle

Maintain a Healthy Back with Movement

- Transform any traditional, stationary chair into a Saddle Chair with all its postural benefits
- The saddle seat shape will train you to sit in a posturally correct, fluid and upright position that it is automatically correct
- The supporting ball construction allows for an intuitive motion of the seat moving the user in all directions making the sitting experience an active one
- The HUMANTOOL Saddle improves and maintains proper posture and enhances productivity and comfort during your working day

Movement Is Therapy

- The common reason for employee absences due to back pain is from the lack of motion inherent in a stationary sitting position
- Prevent employee health problems caused by prolonged, incorrect sitting posture by providing them a HUMANTOOL Saddle

Health Benefits

- The lower and middle back and core muscles are strengthened, as this sitting posture engages the entire core muscular system
- The continuous movement that this Balance Saddle provides relieves back tension, inherent in incorrect sitting postures
- Overall posture improves, as the pelvis is forced into a more upright position
- Shoulder and neck pain is decreased by the improved position of the lower back
- Pressure on the nerve will decrease in this sitting posture
- Improves metabolism and circulation

Riders know how to sit

"At the beginning it seemed unbelievable, that on a HUMANTOOL Saddle one could train and relax the important muscles for riding while doing office work. I can highly recommend this saddle to everybody. The ordinary sitter may benefit a lot from the purchase of a HUMANTOOL Saddle, as he can learn why the correct sitting posture is so valued."

Kimmo Sulkala

professional trainer, master riding instructor, tournament rider

HUMANTOOL®

Pilot Spot

MADE IN FINLAND Patent pending

98 €

Dynamic support backrest

An ergonomically designed back support originally developed for pilots.

- Adjustable to fit with all kinds of seats
- Completely portable
- Easy to attach and remove
- Infinitely variable and simple height adjustments
- Memory foam cushioning contours to the body and balances weight distribution

The keys to a healthy back:

Posture

Humantool Pilot Spot brings your back into a fully supportive upright position and thus straightens the spine. This upright posture serves to minimize strain in your back, shoulders, and neck.

Movement

Humantool Pilot Spot allows your back to rest in a fully supported position, while encouraging continuous, light motion. This serves to engage all back muscles and increase metabolism.
